
300wh power station in China in Dominican-Republic

What is the current condition of the Dominican energy sector?

The PEN presents the current condition of the Dominican energy sector while outlining its future development. The DR's installed generation capacity connected to the National Interconnected Electric System (Sistema Eléctrico Nacional Interconectado - SENI) is around 5,631.47 MW and the average peak demand is around 3,312 MW.

Could a water-based power plant benefit Santo Domingo?

A water-based power plant could be one very valuable asset. Estrella del Mar III offers a host of benefits to the people of lively Santo Domingo, with a more reliable energy supply, reduced LCoE (levelized cost of electricity), and less noise--residential housing is close to the power plant.

Is the electric power sector affecting the Dominican economy?

Despite the present administration's efforts to increase the installed capacity of electricity generation from renewable sources, the electric power sector continues to be one of the most significant problems affecting the Dominican economy.

Does Santo Domingo need a power plant?

The steady flow of electricity can support both tourism and Santo Domingo's innovative start-up scene. Nobel literature laureate Mario Vargas Llosa described the Dominican "appetite for noise" in his book *The Feast of the Goat*. A city that's already pulsating doesn't need any extra noise from a power plant.
