What is a 4680 battery?

The 4680 battery is a new kind of cylindrical lithium-ion battery that is designed to power electric vehicles. It gets its name from its dimensions--46 millimeters in diameter and 80 millimeters in height. This larger size allows it to store more energy and handle more heat, making it ideal for high-performance applications.

What is the difference between a lithium ion and a 4680 battery?

Traditional Lithium-Ion Batteries: Typically 200-250 Wh/L Comparison: The 4680 battery offers a significantly higher energy density compared to traditional lithium-ion batteries.

Why is a 4680 battery better than other batteries?

- o Higher energy density: This means that the 4680 battery can store more energy per unit volume or weight than other batteries. This results in longer driving ranges and lower battery weights for electric vehicles.
- o Higher power density: This means that the 4680 battery can deliver more power per unit volume or weight than other batteries.
