# Amorphous kw sine wave inverter

What is a pure sine wave inverter?

A pure sine wave inverter is a device that converts DC power from a battery into AC power, allowing you to charge almost any household appliance or electronic device off-grid.

Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it's much more efficient than the older, jagged wave inverters.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. \$500 and above: This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.

Do you need a sine wave inverter for solar panels?

You need a pure sine wave inverter if you plan to install solar panels on your roof or RV. Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level.
