How to connect lithium solar batteries in series?

Connecting Lithium Solar Batteries in Series: To connect lithium solar batteries in series, you simply link the negative pole of one battery to the positive pole of the next battery. This ensures that the same current flows through all the batteries. The total voltage of the series connection is the sum of the individual voltages.

How to connect lithium solar batteries in parallel?

Connecting Lithium Solar Batteries in Parallel: When connecting batteries in parallel, the positive terminals are connected together, and the negative terminals are connected together. The ampere-hour capacity of the individual batteries adds up, while the total voltage remains the same as the individual batteries.

What is the purpose of connecting lithium solar batteries in series?

The main purpose of connecting lithium solar batteries in series is to increase the output voltage. By adding up the voltages of the individual batteries, you can power devices that require higher voltage amounts. For example, connecting two 24V 100Ah batteries in series will result in a combined voltage of 48V while maintaining the same capacity.
