# Base station communication distance is large

What is a base station?

Base stations are the backbone of modern wireless communication networks. They ensure that mobile devices can connect to the internet, make calls, and send data without interruption.

What is a mobile communication base station?

Mobile communication base station is a form of radio station, which refers to a radio transceiver station that transmits information between mobile phone terminals through a mobile communication exchange center in a certain radio coverage area.

What is a base station in a cellular network?

It acts as the intermediary between the mobile device and the broader telecommunications network, facilitating both data transfer and voice communication. In cellular networks, a base station typically consists of antennas, a transmitter/receiver system, and a base station controller (BSC).

Why is the distance between a macro base station and a MU important?

Abstract--In underlay heterogeneous networks (HetNets), the distance between a macro base station (MBS) and a macro user (MU) is crucial for a small-cell based station (SBS) to control the interference to the MU and achieve the coexistence.

1. Introduction Recently, with the rapid development of wireless communication technology, the enhancement of wireless network performance is concerned with meeting the ...

The LBA3 private network micro-base station system is a high-performance long-distance and large-bandwidth link system solution independently developed by Leixun Innovation consists ...

Therefore, to solve the above problems, we study the 5 G base station optimization location model considering timely reliability. Firstly, combining the definition of network ...

The heterogeneous network (HetNet) is a promising candidate to provide flexible wireless accesses for future wireless communications [1]. Within a HetNet, a macro base ...

The developed model can facilitate the rollout of 5G technology. Due to the high propagation loss and blockage-sensitive characteristics of millimeter waves (mmWaves), ...

Whether in the form of large macro stations or tiny small cells, base stations will continue to evolve, providing the foundation for next-generation communication technologies ...

Macro Base Station A macro base station refers to a wireless signal transmitting base station of a communication operator. A macro base station has a large coverage ...

Base Stations Enable Mobile Communications Antennas Are Placed in Various Locations More

---

Mobile Devices Means More Base Stations  
Base Station Output Power Is Low  
Exposure Limits Are Set by Independent Organizations  
Exposure Levels Are Much Lower Than The Limits  
Public Access Is Restricted Where Needed  
No Adverse Health Effects According to The Who  
Each base station can only serve a limited number of mobile devices at a time. As the number of mobile devices in a community grows, more base stations are needed. For that reason, more antennas are needed in such crowded locations as shopping malls where there are many mobile phone users. However, the shorter the distance between base station ante...
