## Battery cabinet in the power distribution room

How to protect a lithium battery energy storage cabinet?

At the same time, setting the charging and discharging parameters, configuring the safety and protection settings, and protecting the lithium battery energy storage cabinet from potential dangers such as overcurrent, overvoltage, and overtemperature are necessary.

What type of batteries are used in energy storage cabinets?

Lithium batteries have become the most commonly used battery type in modern energy storage cabinets due to their high energy density, long life, low self-discharge rate and fast charge and discharge speed.

What should a battery cabinet have?

Insulation system- insulation is also a safety measure a battery cabinet should have. Grille - it allows for free air flow thereby ensuring efficient cooling. Dual-stage venting system - It is a common technology in electric vehicle battery systems. The first stage will prevent water ingress and equalize pressure.

What are the parts of a battery storage cabinet?

Let's look at the most common parts: Frame - it forms the outer structure. In most cases, you will mount or weld various panels on the structure. The battery storage cabinet may have top, bottom, and side panels. Door - allows you to access the battery box enclosure. You can use hinges to attach the door to the enclosure structure.
