## Bidirectional grid-connected inverter design

What is a bidirectional grid connected converter (BGC)?

The Bidirectional Grid Connected converter (BGC) is a key interface connecting the power grid and DC microgrid systems, which can realize bi-directional energy flow. The most common control method for grid-connected inverters is voltage and current double closed-loop control based on a proportional-integral (PI) regulator.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.
