# Black Mountain Flow Battery Price

How much do flow batteries cost?

The Redflow Zcell (a 10kWh battery) cost around \$12,600 AUD, not including inverter or installation. You'd also need a solar system size of at least 5kW to be able to charge your batteries consistently, which cost roughly \$5,000 - \$6,000.

How long do flow batteries last?

Flow batteries also boast impressive longevity. In ideal conditions, they can withstand many years of use with minimal degradation, allowing for up to 20,000 cycles. This fact is especially significant, as it can directly affect the total cost of energy storage, bringing down the cost per kWh over the battery's lifespan.

What is a flow battery?

At their heart, flow batteries are electrochemical systems that store power in liquid solutions contained within external tanks. This design differs significantly from solid-state batteries, such as lithium-ion variants, where energy is enclosed within the battery unit itself.

Are flow batteries a good energy storage solution?

Let's look at some key aspects that make flow batteries an attractive energy storage solution:

**Scalability:** As mentioned earlier, increasing the volume of electrolytes can scale up energy capacity. **Durability:** Due to low wear and tear, flow batteries can sustain multiple cycles over many years without significant efficiency loss.

It's integral to understanding the long-term value of a solution, including flow batteries. Diving into the specifics, the cost per kWh is calculated by taking the total costs of ...
