
Cost Analysis of High-Temperature Resistant Off-Grid Solar Containers for Hospitals

How much does a high temperature sensible thermal energy storage system cost?

Table 1. High temperature sensible thermal energy storage system studies for CSP plants. For DMT systems, Pacheco et al. (2002) reported a specific cost of 21 US\$/kWh (i.e. the total cost of TES divided by the storage capacity) for a DMT tank filled with Quartzite compared to a 30 US\$/kWh specific cost in two-tank molten salt systems.

How much does a thermal energy storage system cost?

At present, considering an average storage cost of 22 US\$/kWh for the commercial thermal energy storage system in CSP plants, the cost of TES systems for utility scale applications is still ~30-150 times lower than that of electricity storage systems (Lai and McCulloch, 2017, Luo et al., 2015).
