Does value-added efficiency of energy storage enterprises improve after 2019?

The results demonstrate that the value chain presents an arc-shaped smile, and the overall value-added capacity has improved after 2019, but the midstream link is still weak. The main driving factors of value-added efficiency of energy storage enterprises in different links are quite different.

How to measure value-added efficiency of energy storage industry?

Therefore, the value-added efficiency of the energy storage industry is measured according to the input indicators, output indicators and external environment indicators that affect the value-added capacity in the above.

How to evaluate the value-added capacity of energy storage industry?

Based on the "smiling curve" theory, we evaluate the value-added capacity of energy storage industry. Using the Principal Component Analysis method, we excavate the driving factors that affect value-added capabilities. Adopting the three-stage DEA-Malmquist index methods to analyze the efficiency differences of each link of the value chain.

What drives value-added efficiency of energy storage enterprises?

The main driving factors of value-added efficiency of energy storage enterprises in different links are quite different. Under the new development requirements, enterprises should actively seek value-added breakthroughs.
