## Energy storage unit price cost

How much does the energy storage system cost?

The energy storage system is a 4MW,32MWh NaS battery consisting of 80 modules,each weighing 3 600 kg. The total cost of the battery system was USD 25 millionand included USD 10 million for construction of the building to house the batteries (built by Burns &McDonnell) and the new substation at Alamito Creek.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering,procurement,and construction (EPC) costs can be estimated using the footprint or total volume and weightof the battery energy storage system (BESS). For this report,volume was used as a proxy for these metrics.

How much does energy storage cost in 2025?

In 2025,they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks.
