What is explosion proof battery management system?

Bundled with our Explosion Proof Battery Management System, the software application manages the Controller and records all battery readings in its database for viewing, trending, and reporting. Data is turned into actionable information in the form of alerts and dashboards.

What is an explosion-proof battery management system (ex BMS)?

An Explosion-Proof Battery Management System (Ex BMS) is an advanced monitoring and control solution specifically designed for batteries operating in hazardous areas, such as oil & gas facilities, petrochemical plants, mining operations, and chemical processing environments.

When are hydrogen atoms considered "explosion-proof"?

They are considered safe when, under conditions of natural or forced ventilation, therefore defined as "explosion-proof", the hydrogen concentration is guaranteed below the safety threshold of 4% by volume in the air.

What is a capeserve explosion-proof battery management system?

The Capeserve Explosion-Proof Battery Management System is designed with flexibility and ease of integration in mind. It is compatible with lead-acid and nickel-cadmium batteries (1.2V to 16V per cell) and features optical isolation and ISO-calibrated sensors for maximum accuracy.
