
Factory price bus tie breaker in Moscow

What is a bus tie breaker?

In electrical distribution systems, a bus tie breaker is used to connect two sections of an electrical bus serving different power sources. Bus tie breakers are usually open, keeping the two sections separate. When one power source fails, the tie breaker can be closed to maintain service through the section, avoiding a planned service outage.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents. In the context of maintenance, tie breakers offer significant advantages.

What is a bus tie switchgear?

Product Overview: The Bus Tie Switchgear is a critical component in medium-voltage (MV) power distribution systems, designed to interconnect and isolate multiple busbar sections. Rated for 10KV (IEC) to 15KV (ANSI) applications, it ensures load balancing, enhanced power continuity, and rapid system reconfiguration during faults or maintenance.

How many bus tie breaker controllers can a Deif power management system include?

A DEIF power management system can include as many Bus tie breaker controllers as necessary. Part of the versatile PPM 300 range The PPM 300 Bus tie breaker controller is part of the DEIF PPM 300 range of versatile controllers with built-in multi-master power management features.
