What is the lithium supply chain of China?

In fact, the lithium supply chain of China refers not only to lithium ore, primary products, secondary products, and final products but also refers to multiple countries that trade with China at various stages of the lithium resources chain. The scholarly focus on securing supply chains for critical metals has grown increasingly important.

Is China's lithium supply chain a linchpin in the global lithium market?

3.1. Analysis of material flow and network metrics of the lithium supply chain network In Fig. 1, China's lithium supply chain emerges as a linchpin in the global lithium market, accounting for 80.61% of global lithium resource consumption in 2021--equivalent to 456.29 kt of LCE.

Is lithium a strategic resource for electric vehicles?

The growing demand for electric vehicles has intensified global competition for lithium, a mineral now classified as a strategic resource by the United States, the European Union, and China (Agusdinata et al., 2018; Yan et al., 2020; H. Li et al., 2022).

Does China's TNRI-CV influence the global lithium market?

The mean TNRI-CV increases from 0.02 in 2017 to 0.05 in 2021, reinforcing China's growing influence in the global lithium market. However, the median consistently underperforms the mean, suggesting a less skewed distribution of influential trade relationships compared to imports.
