# Maputo grid-connected wind power generation system

Can 100 MW wind power be integrated into Maputo power system?

With the presently relative little power generation capacity in the Maputo grid, with a minimum load of 100 MW (exclusive Mozal), and with a transmission grid designed for 200 MW peak load in Maputo, supplied from South Africa, 100 MW wind power capacity can easily be integrated into the Maputo power system.

Can a 10 MW wind farm be built south of Maputo?

It was agreed to do the feasibility studies for a 10 MW wind farm south of Maputo, connected to the existing Salamanga power substation. The size of the wind turbine units should be around 1 MW. Does Mozambique need a wind power plant?

A wind atlas for Mozambique needs to be produced, after the ongoing wind measurements at some locations confirm the wind potential. From the economic study, it has become clear that with the given energy and energy resources scenario in Mozambique, a wind power plant is not an economically viable option.
