
Number of solar inverter strings connected

How many strings can be connected to a solar inverter?

Here are the results we calculated: This inverter has 2 MPPT trackers, so a total of 2 strings can be connected to the inverter. We know that there can only be 13 modules maximum installed. We can have one MPPT with 6 modules in a string and the other at 7 modules in a string. Check out UpTop Solar String Sizing Tool that does this for you!

What is the minimum string size of a PV inverter?

The minimum string size, then, is 15 modules. The maximum string size is the maximum number of PV modules that can be connected in series and maintain a voltage below the maximum allowed input voltage of the inverter. The Module Voc_max is calculated using the coldest temperature when the modules produce the highest expected voltage.

How many solar modules per string?

Thus, the optimal number of modules per string is 16. Unlock the full potential of your solar power system! By leveraging the rated operating voltage parameters provided by inverter manufacturers, you can effortlessly determine the optimal number of modules per string.

How to design solar panel strings?

The design of solar panel strings needs to satisfy two conditions simultaneously: The maximum open-circuit voltage of the series-connected photovoltaic modules should be lower than the inverter's maximum input voltage. The MPPT voltage of the series-connected photovoltaic modules should fall within the inverter's MPPT voltage range.
