## Shelf life of solar panels

How long do solar panels last?

Solar panels offer homeowners a great way to reduce their carbon footprint. Luckily, the lifespan of solar panels will allow you to produce energy for many years, providing a great return on investment. You can count on most photovoltaic solar panels to last 25 years before they begin to noticeably degrade.

How can I extend the lifespan of my solar panels?

Here are some tips that can help you extend the lifespan of your solar panels: Investing in a high-quality solar photovoltaic system from a reputable manufacturer like FusionSolar is the first step toward ensuring long-term performance and durability.

How long will NREL solar panels last?

NREL's median degradation rate of 0.5% means a typical solar panel system will still operate at about 90% of its original capacity after 20 years. Even with a higher degradation rate of 0.8%, your panels would keep about 84% efficiency after the same period. Some systems perform better than expected.

How long do photovoltaic panels last?

The U.S. Department of Energy says photovoltaic (PV) modules should last about 30-35 years. Many panels keep making electricity much longer. Your panels won't just stop working after 30 years. They'll make less electricity gradually but stay functional.

This article gets into how long solar panels last, what impacts their durability, and ways to boost their performance through the years. You'll discover degradation rates, ...

**Key Takeaways** Solar panels represent a significant investment, promising decades of clean energy and utility savings. But how long do they actually last in Orange County's ...
