
Solar inverter DC arc protection

Do solar inverters need AFCI protection?

These rules mandate that all solar inverters operating at any DC voltage higher than 120 V have to include AFCI protection to prevent fires caused by arc faults. Solar inverters without AFCIs were still allowed until the end of 2024, but from 2025 onwards, compliance is mandatory for certification and safety inspections.

Can DC arcing protect the inverter and photovoltaic system?

This paper presents a protection solution based on DC arcing test that monitors and analyses DC arcing to protect the inverter and the photovoltaic system. The test results show that this solution can effectively improve the reliability and safety of the inverter, avoiding equipment damage and accident caused by DC arcing. 01. BACKGROUND

Do PV inverters have arc fault detection?

Fires at traditional PV stations cannot be directly put out with water because of the high DC voltage, so installing PV inverters that are equipped with the arc fault detection function is a must. What is an AFCI circuit breaker and how does it work?
