## Solar inverter directly connected to generator

How do I connect a solar inverter to a generator?

To connect a solar inverter, it should be connected to the utility side of the transfer switch. Connecting the solar to the generator can lead to bad outcomes. It's recommended to consult your Power Company (POCO) for their approved equipment list before proceeding. Need assistance? Please visit our Forum Help Section.

How does a solar inverter work?

The solar inverter will automatically switch between solar power and generator power depending on the availability of sunlight, ensuring a continuous supply of electricity. By adding a generator to your solar power system, you can enhance its reliability and ensure that you have a backup power source when needed.

Is an inverter necessary for a solar generator?

An inverter is good for a solar generator as it can help the generator last longer during power outages. The inverter gets its power from the generator instead of the solar battery, allowing you to use the solar battery to power your load at night when there is no sun.

Are all generators compatible with solar inverters?

Compatibility: Not all generators are compatible with solar inverters, so it is important to ensure that the generator you are using is compatible with the inverter. Power output limitations: Generators may have limited power output capacity, which may not be sufficient to power the inverter and meet the power requirements of your home or business.
