
Solar panels connected in series

How to wire solar panels in series?

To wire solar panels in series, connect the positive terminal on the first panel to the negative terminal on the next, and so on. The resulting voltage will be the sum of all of the panel voltages in the series. However, the total current will be equal to the output current of a single panel.

How to wire solar panels together?

The solar panels are to be wired together in series. Be sure to verify the solar panel specification of open circuit voltage measurement (approx. 20VDC). Regulator will measure approx. 40VDC in open circuit. Wire entrance hardware per water tight as required (3 places).

How do I wire solar panels in parallel?

For example, if wiring 3 solar panels in parallel, use a pair of 3 to 1 branch connectors. And if wiring 4 solar panels in parallel, use 4 to 1 branch connectors. Note: When wiring solar panels in series, I showed you how to confirm that they were correctly wired by checking the open circuit voltage of the 2-panel string with a multimeter.
