What is solar panel efficiency?

Solar Panel Efficiency explained. Solar panel efficiency is the amount of sunlight (solar irradiance) that falls on the surface of a solar panel and is converted into electricity. Due to the many advances in photovoltaic technology over the last decade, the average panel conversion efficiency has increased from 15% to over 24%.

What's the difference between an average and a highly efficient solar panel?

The difference between an average panel and a highly efficient one can mean fitting a complete solar energy system on a smaller roof--or generating substantially more power from the space you have. Today, most panels are at least 20% efficient, but the best ones convert over 22% of the sun's energy into electricity.

What is the most efficient solar panel?

The most efficient solar panel available for homes today is Maxison's 440-watt panel at 22.8% efficiency. Solar panel efficiency is the percentage of incoming sunlight that a single solar panel can convert into electricity. Maxison, Qcells, Solarever USA, Canadian Solar, and REC currently offer the most efficient solar panels on EnergySage.
