# What base stations are there in containers

What are container freight stations?

They act as the intermediaries in the shipment of most containers around the world. By forming a vital part of the global supply chain, they allow shipping companies and ports to efficiently store and ship containers. In this article, we will take a look at what container freight stations are, their purpose, location, and types.

What is a container freight station (CFS)?

We will also look at how it is different from other types of container holding sites, and what makes it special. A Container Freight Station (CFS) is a container storage facility that is used primarily for unit consolidation or deconsolidation. They house containers that are on their way to large shipment hubs, ports etc.

How is a container freight station different from other container yards?

The other common types of container holding sites are- Container Yards (CY or depots), Inland Container Depots (ICDs), and Bonded Warehouses. They vary from a CFS and are often confused with each other.

How does a container freight station work?

At a Container Freight Station (CFS), the whole operation kicks off when cargo arrives and staff start going through the paperwork. They need to make sure everything matches up properly before moving anything forward. When the receiving process has solid documentation behind it, there's less chance of running into problems down the line.
