# What is the price of battery charging energy storage

How much does a battery energy storage system cost?

The battery energy storage system typically accounts for approximately 70% of the total project CAPEX. Recent estimates from KPMG and the World Energy Council suggest the current market value for a battery energy storage total system costs is around  $\text{\$}680/\text{kWh}$  (EUR900-EUR3500/kWh, or approximately  $\text{\$}705/\text{kWh}$  at the bottom end of the estimate).

Are there models for estimating battery energy storage costs?

The aim of this study is to identify existing models for estimating costs of battery energy storage systems (BESS) for both behind the meter and in-front of the meter applications. The study will, from available literature, analyse and project future BESS cost development.

How much does a battery cost?

Most households are likely to benefit from a battery with a decent amount of capacity, about 10kWh or more. But a smaller battery can be sufficient for small households with low energy usage. As an example, one of the most popular batteries is the 13.5kWh Tesla Powerwall 3. This currently costs about  $\text{\$}11,000$  installed after the federal rebate.
