
Why the energy storage project was stopped

Is the energy storage mandate a big change?

This is a big change towards rationalization of renewables but hidden within that is a removal of the energy storage mandate," George Hilton, research and analysis manager at S&P Global, tells ESS News. S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand.

How will the energy storage mandate impact China?

S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand. With China accounting for around 56% of the global energy storage demand in 2024, the impact of such a policy change will be massive.

How will China's energy storage policy affect global demand?

"China was on-track to install over 60% of all utility scale storage globally in 2025 and so in the absence of further policy changes, about 45% of global demand has just been wiped away," Hilton says. The ripple effect on the global demand-supply balance will involve further downward pressure on energy storage prices.

How will a new battery energy supply chain affect prices?

S&P Global expects the move to reverberate throughout the global battery energy storage supply chain, further driving down prices that are already at historically low levels. New renewable energy plants in China will no longer be required to build storage in order to secure development rights and grid connection.

Clean energy manufacturers canceled, closed or downsized nearly \$8 billion in projects in the first quarter of 2025, as the Trump administration's rollback of support for the ...

Taiwan's energy storage market is becoming increasingly risky and difficult to promote. Pictured is the energy storage system installed at the Luyuan Substation, which is ...

Low-carbon hydrogen -- made with either renewable energy and water or gas and carbon capture and storage -- has struggled to secure upfront contracts from buyers, with so ...

In a major policy shift towards electricity market liberalization, China has introduced contract for difference (CfD) auctions for renewable energy plants and removed the ...

Businesses canceled, closed, and scaled back more than \$22 billion worth of new factories and clean energy projects in the first half of 2025 after cancelling another \$6.7 billion ...

The new policy has fully unlocked the value of independent energy storage as a power system regulator, an executive from a major energy storage equipment manufacturer in Guangdong ...

Over 20 GWh of planned energy storage cell production capacity for 2028 has been canceled this year, according to reports compiled by the US Energy Council (CEC). These ...

Why the La Mesa Project Became a Flashpoint for Battery Storage Siting Siting battery storage near communities is one of the biggest challenges facing the clean energy ...

The Policy Pivot That Shook the Industry China's energy storage sector grew like bamboo after rain for four straight years... until February 2025. That's when the government ...

Plans for huge new oceanfront battery storage plant are withdrawn following disastrous Moss Landing fire January fire cost Texas company \$400 million and stiffened ...
