Why is distributed solar PV important in Yemen?

As most of the population in Yemen live in rural areas and are geographically dispersed, it is costly to connect them to the main grid, making distributed solar PV solutions a critical part of any electrification strategy in Yemen. Figure 1 shows the photovoltaic power potential in Yemen. Figure 1: Photovoltaic (PV) Power Potential

Does Yemen have solar energy?

Yemen is a sunbelt country with one of the highest levels of solar irradiation and an annual daily sunshine exceeding eight hours. This means that the different solar energy technologies for heating (e.g., Solar Water Heaters (SWHs)) and for electricity production (e.g., solar photovoltaic (PV)) have considerable potential in Yemen.

Is solar energy a beacon of hope for Yemen?

In a country long plagued by power shortages, solar energy is emerging as a beacon of hope. Yemen, widely regarded as the Middle East's least electrified nation, is now benefiting from its first large-scale solar plant, which is helping restore power to tens of thousands of households in Aden.

Is solar a stopgap for Yemen?

For Yemen, solar is more than a stopgap. It could form the foundation of a rebuilt energy system that is cleaner, more resilient, and less dependent on imported fuels. If the expansion plan succeeds and output scales, Yemen may begin to reverse decades of decline in electricity access.
